We have been doing lots of fantastic writing about farms and farm animals. Latoya wrote a descriptive sentence about a donkey; Baileigh wrote an informative text about sheep and Athina wrote a recount about our excursion to the farm.

Elijah independently solves addition problems and uses pictures and words to record his results.

Dakirah wrote an explanation about the life cycle of a chicken.

Korinito solves addition problems using counters. He then uses pictures and words to record his results.

Moana solves subtraction problems by drawing the counters and showing how many she takes away by crossing them out.
